

PROJECT STATUS REPORT	
Project Name	Learn to invest app
Scrum Date	November 14
Project Status	Green 
Status Description	Status is green: <ul style="list-style-type: none"> - user auth completely done - user auth + user initialization in our app database complete - navigation and tabs created - user data populated from db on profile page - user, courses, and portfolio model + routes created and all have a working fetch by id and create route (from AWS API)
Activities—During the Past 2 Weeks	
Erika - back-end infrastructure setup, initial models and database tables created, front-end validation, and route testing	
Hayden - Completed user auth (amplify setup + user setup in app db), set up IOS and Android emulators, created app navigation bar (+ pages for each tab)	
Erika & Hayden - user authentication testing, logo design + official app name	
Activities—Planned for Next 2 Weeks	
Hayden - Complete profile page with styled data, design courses and add at least one to the app	
Erika - Continue adding models to db and routes to API + testing of newly added routes	
Project Issues	
<ul style="list-style-type: none"> - AWS already charged us for the database since we exceeded free tier usage (only \$0.26) and we are unsure why since we barely used it. We are going to look into this to make sure we don't end up with a huge charge once we start querying more. 	
Project Changes
